Abstract

[View references \(24\)](#) ▾

Introduction Swabhimaan is a community-based programme to improve adolescent girls' and women's nutrition in the rural areas of three Indian states-Bihar, Chhattisgarh and Odisha with high prevalence of undernutrition. Methods and analysis Swabhimaan has a nested prospective, non-randomised controlled evaluation. Since 2017, five intervention sites receive community-led interventions through national government's livelihood mission supported women's self-help group federations and five control sites will initiate these activities 36 months later, in 2020. Community-led activities aim to improve coverage of 18 interventions including adequacy of food consumed, prevention of micronutrient deficiencies, access to basic health services and special care of nutritionally at risk girls and women, improving hygiene and access to water and sanitation services and access to family planning services. The evaluation includes baseline (2016-2017), midline (2018-2019) and endline (2020-2021) surveys covering 6638 adolescent girls, 2992 pregnant women and 8755 mothers of children under 2. The final impact analysis will be by intention to treat, comparing primary and secondary outcomes in five intervention areas and five control areas. The primary outcomes are: (1) a 15% reduction in the proportion of adolescent girls with a body mass index (BMI) <18.5 kg/m²; (2) a 15% reduction in the proportion of mothers of children under two with a BMI <18.5 kg/m² and (3) and a 0.4 cm improvement in mean mid-upper arm circumference among pregnant women. Ethics and dissemination All procedures involving human subjects were approved by the Institutional Ethics Committee of the All India Institute of Medical Sciences, Bihar, Chhattisgarh and Odisha and in compliance with guidelines laid down in the Declaration of Helsinki. Evidence will inform maternal and preconception nutrition policy at national and state level. Trial registration number 58261b2f46876 and CTRI/2016/11/007482; Pre-results. © Author(s) (or their employer(s)) 2019. Re-use permitted under CC BY-NC. No commercial re-use. Ageing International
Volume 43, Issue 2, 1 June 2018, Pages 207-236

Exploring Potential Linkages between Social Support, Retirement and Subjective Wellbeing among Older Indians: Does it a Challenge to Policy Makers? (Article)

Chaurasia, H. ✉, Brajesh ✉, Sarode, S. ✉ 👤

International Institute for Population Sciences, Govandi Station Road, Deonar, Mumbai, 400088, India

Abstract

View references (75)

Subjective wellbeing is an important component of wellbeing that benefits people by influencing their subjective feelings. Using the Building Knowledge Base on Population Ageing in India (BKPAI 2011) survey data, the study attempts to investigate the linkages between social support and subjective wellbeing (SWB) among older adults of age 60 and above in India. The path analysis revealed that the social support have an indirectly effect on SWB through mediating role of family income, education, religion and financial status. The social support explained 23% of the variation in SWB. The structural equation model were performed to test the relationship between the latent variables divided into exogenous and endogenous, with the former affecting the latter. Study also tested the reliability of the questionnaire scores and its criterion and structural validity of SWB. The results confirm the validity is suitable for the multidimensional assessment of SWB. Using instrumental variables approach there is moderate evidence of positive correlation and endogenous regressors social support yield unbiased and consistent and effect of being involuntary retired has a negative on SWB, but the effect is not significantly different from zero. However, this study doesn't found significant positive effect between retirement and SWB. In view of the findings, the study calls for devising policy implications that contribute to support and wellbeing research for future. © 2017, Springer Science+Business Media, LLC, part of Springer Nature.
